

Million team Self-reflection

Lingyu

Time: 29/09/2019(Week 8)

Roles: System manager/Developer

1. What have I done since the last time report?

I tried to solve the bug of migrating the table but failed, I discussed with our clients and still no solution for the bug. So I created a new model and migrate the related static file into database table. Then I finished the Update function for degree, which can update the database.

2. Self-reflection

The bug is related to some environment settings according to my observation. But I offered a solution which is not so perfect. And I may need to dedicate more hours to the project, 10 hours are not enough to provide a good quality project.

3. What is the plan until next report?

Planning to finish the CRD for degree part and change some codes which may still interacting with the static file. Engaging to CRUD in elastic-search part.
