

Week7

Description	Feedback or Reflection from	Decision and activities
Learning code is not fast enough and inefficient	Sayed	I decided to start from the basic, I learned about the basic of Django and Bootstrap framework.
Due to the relatively small working hours, we need to prioritize each task.	Shadow team	Add a new label into trello named Urgent to put anything which is in the current urgent need to complete
We should show more details of decision-making, such as how to choose the UI, such as showing screenshots of different versions.	Shadow team	We will record the changes in the UI of different versions and record our final choice.
Due to insufficient communication within the front-end team, we may waste some time to do the duplicated job.	Xiangyu	We need to discuss which part of the tasks should be done first.
Sitemap (just an optional idea, like dashboard->comp8715->grade). It depends on how large our website would be	Client	We have added this feature
ANU staffs may prefer using course code to search instead of using title.	Client	We fixed this function in the course, and will fix the function of using the degree and MMS code in subsequent week.
The course title needs to be shown in the result table of the search. Could put title together with course code if click one course in a row or show the title	Client	We decided not only to show the big title of the page, but also to use the sitemap to let the user know exactly

when clicking on the course code.		which interface they are working on (which course, which degree, which MMS)
