Client meeting

Meeting called by:	Kundu Gui	**Type of meeting:**	Client meeting
Facilitator:	Kundu Gui	**Note taker:**	Kundu Gui
Timekeeper:	Kundu Gui		

Attendees: Joseph Meltzer, Safeer Syed,Kundu Gui, Xiangyu Chen, Zifeng Liu, Rui Zhang, Yichen Li, Lingyu Xia

Please read: None

Please bring: None

Agenda item:	Demonstrate the demo	**Presenter:**	All members
Agenda item:	Demonstrate the poster	**Presenter:**	All members
Agenda item:	Arrange the time and room for the next client meeting	**Presenter:**	Kundu Gui

Feedback：

● Poster

General：

1， The title of the Problem should be changed to Context. And it is recommended to put scope and problem together.
2， Overall color: orange may be too much color,
3， Title may need to change the font, more impact
4， All text content should be larger

5，   The second sentence of problem should explain why we need a customization interface. For example, we need to update the system daily up to date information so that students can use the system correctly. If the student wants to continue using it in the next few years, then we need Manual update information.
6，   The reason we need to do MVP is that if the feature does not exist, then there will be more work in the long run.
7，   The middle part of the poster
   A. Reduced, only the left side of the screenshot,
   B.   Zoom in and screenshots may have problems,
   It is recommended to compare the screenshot device, select the device with the highest resolution, or choose print web page.
   It is recommended to draw some new maps or icons to explain the entire workflow.
   C .   Or use a combination of ICON and screenshots
8，   Tech of the poster
   API and Django database and similar, should be put together
   Front-end (because everyone has it) so shouldn't it be here, so we can change it to good User interface
9，   Whether Middleware should be canceled, if there is something special, then put it here, if not, just remove the block, because everyone ajax and js, draw a line, then write mid, do not put pictures
10，   Django frame changed to Django webserver
11，   Use 3D as a whole, or use 2D as a whole
12，   Scope: access control which could change to ensure that only employees can operate

Solution part of the poster:
A. 1, delete the first part, leaving only the second part.
B. Since the first part is not what we did, we only did the custom UI to allow the staff to manipulate the data.
C. 2, increase the description Login system

Impact part of the poster:
A. The second and third parts should be deleted
B. Why MVP needs to be done, useful to anyone, maybe useful to both developer and staff,
C. If we can prove indirectly
D. Some important information is incorrect, but with our CRUD we can fix this information

- **Code/Project**:

Some typo
After deleting, system should be prompted
Should be able to search using the Enter button
The first column of Degree is too wide

MMS: There should be highlight, mms description should only have one line, maybe only 75 words.
The first two lines of MMS should be widened.
